	Non-Metals		Transition Metals		Rare Earth Metals		Halogens
	Alkali Metals		Alkali Earth Metals		Other Metals		Inert Elements

Dissolved Metal Species

Organometallic Compounds -
 Contain organic
 functionality &
 metal center with
 a carbon-metal
 bond

Fig. 15.1. A tentative arsenic cycle in marine ecosystems

Tributyltin oxide

Bis[tri-n-butyltin(IV)]oxide

Used in antifouling paint on boat hulls from 1960s to 2008

Dissolved Organic Nomenclature

All Dissolved Organic Compounds

Importance of Humic Materials

Global Carbon Reservoir

Take Part in Interfacial Phenomena

Undergo Coagulation and Aggregation

Involved in Photochemical Reactions

Contain Radicals

Known Reducing Agents

Methylate Metals

Form Chlorinated Species, THMs DBPs

Detoxify Metals

Limit Bioavailability of Metals

Alter Solubility

Influence Transport

Bind Metals & Organic Pollutants

Terminal Electron Acceptor for Bacteria

Metal Complexation by Humic Materials

Leenheer et al. (1998)

Morel (1983)

Dissolved Organic Nomenclature

All Dissolved Organic Compounds

Metal Organic Complexes

M^{x+} = metal ion, toxic or non, of charge $x+$ (e.g., Cu^{2+} , Al^{3+} , etc.)

NOM^{y-} = natural organic matter of varying negative charge $y-$

$\text{M-NOM}^{(y-x)-}$ = metal complex of natural organic matter

Metal Complexation by Humic Materials

Outer Sphere Binding vs Inner Sphere Binding

Leenheer et al. (1998)

Morel (1983)

Humic material will aggregate
& may “salt out” with cations

FIGURE 6. Structural model of a calcium inner-sphere complex

Leenheer, J.A. et al. (1998) *Environ. Sci. Technol.* 32, 2410

Importance of Humic Materials

Global Carbon Reservoir

Take Part in Interfacial Phenomena

Undergo Coagulation and Aggregation

Involved in Photochemical Reactions

Contain Radicals

Known Reducing Agents

Methylate Metals

Form Chlorinated Species, THMs DBPs

Detoxify Metals

Limit Bioavailability of Metals

Alter Solubility

Influence Transport

Bind Metals & Organic Pollutants

Terminal Electron Acceptor for Bacteria

Primary Hydration Shell of Cu^{2+}

water
molecules

Cu^{2+}

Hydrogen
in white

Oxygen in red

Metal Ion Complexation by EDTA (chelate effect)

Dissolved Metal Species

Metal Inorganic Complexes

M^{x+} = metal ion, toxic or non, of charge $x+$ (e.g., Cu^{2+} , Al^{3+} , etc.)

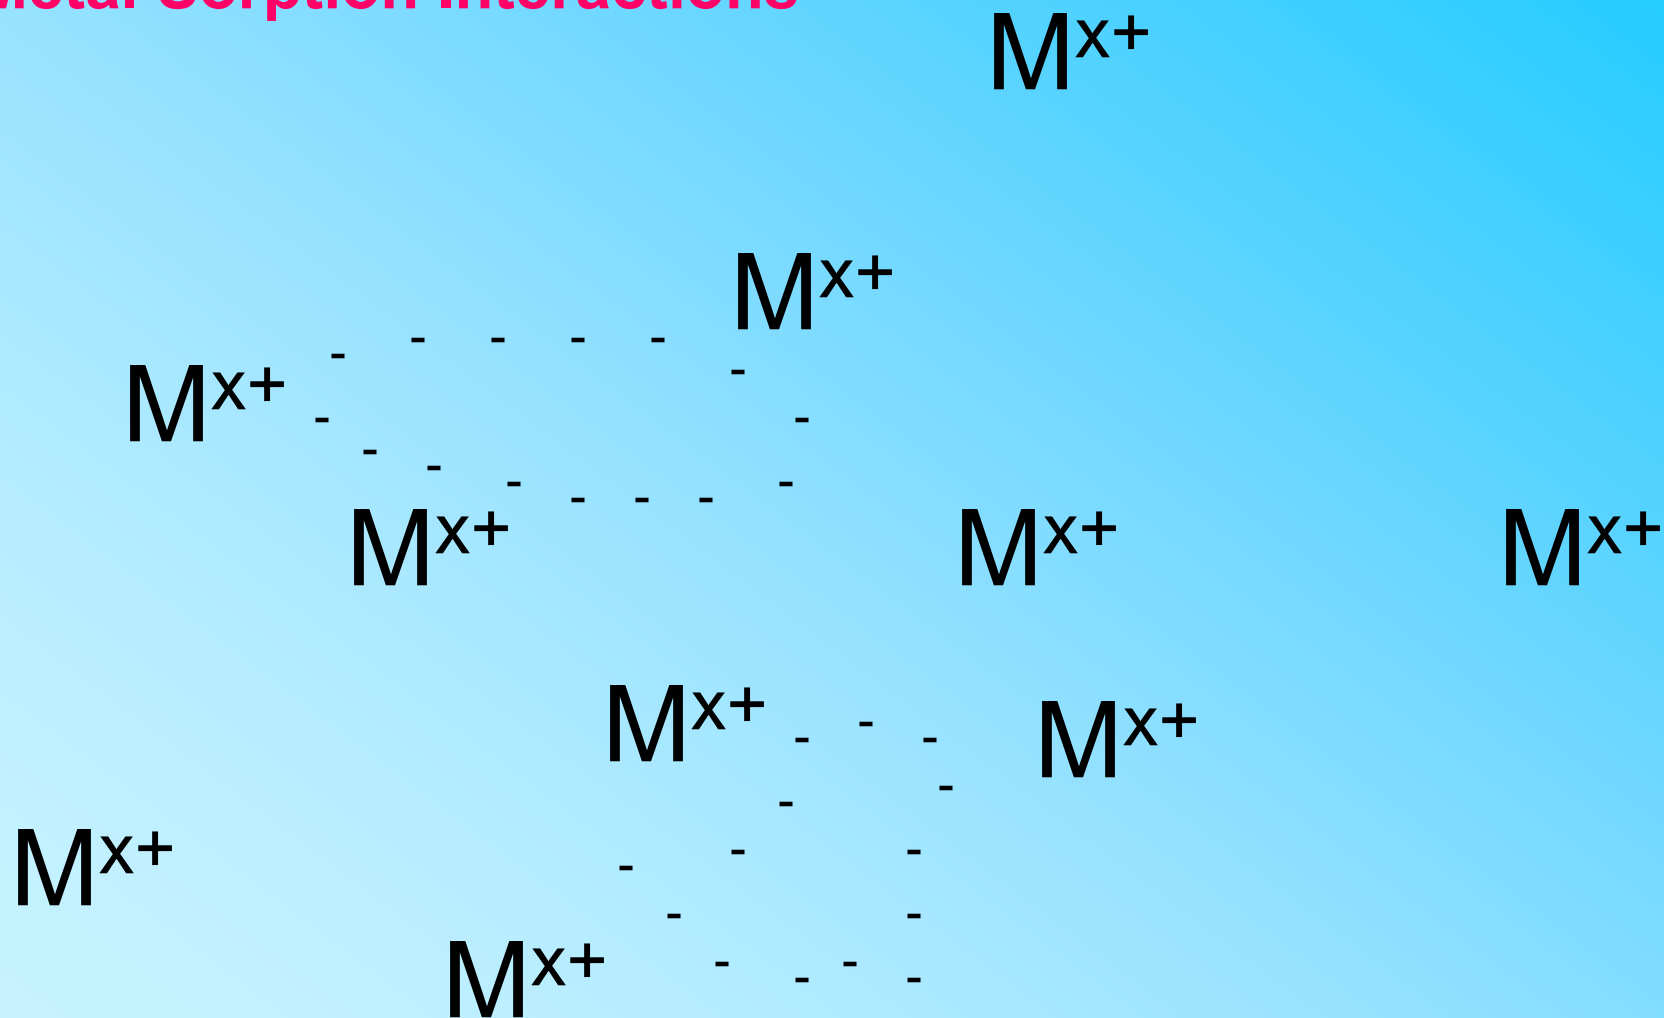

CO_3^{2-} , SO_4^{2-} , Cl^- = inorganic ligands able to bind metal ions

$M-CO_3^{(x-2)}$, $M-Cl^{x-1}$ = metal complex of carbonate, chloride, etc.

Dissolved Metal Species

Metal Sorption Interactions

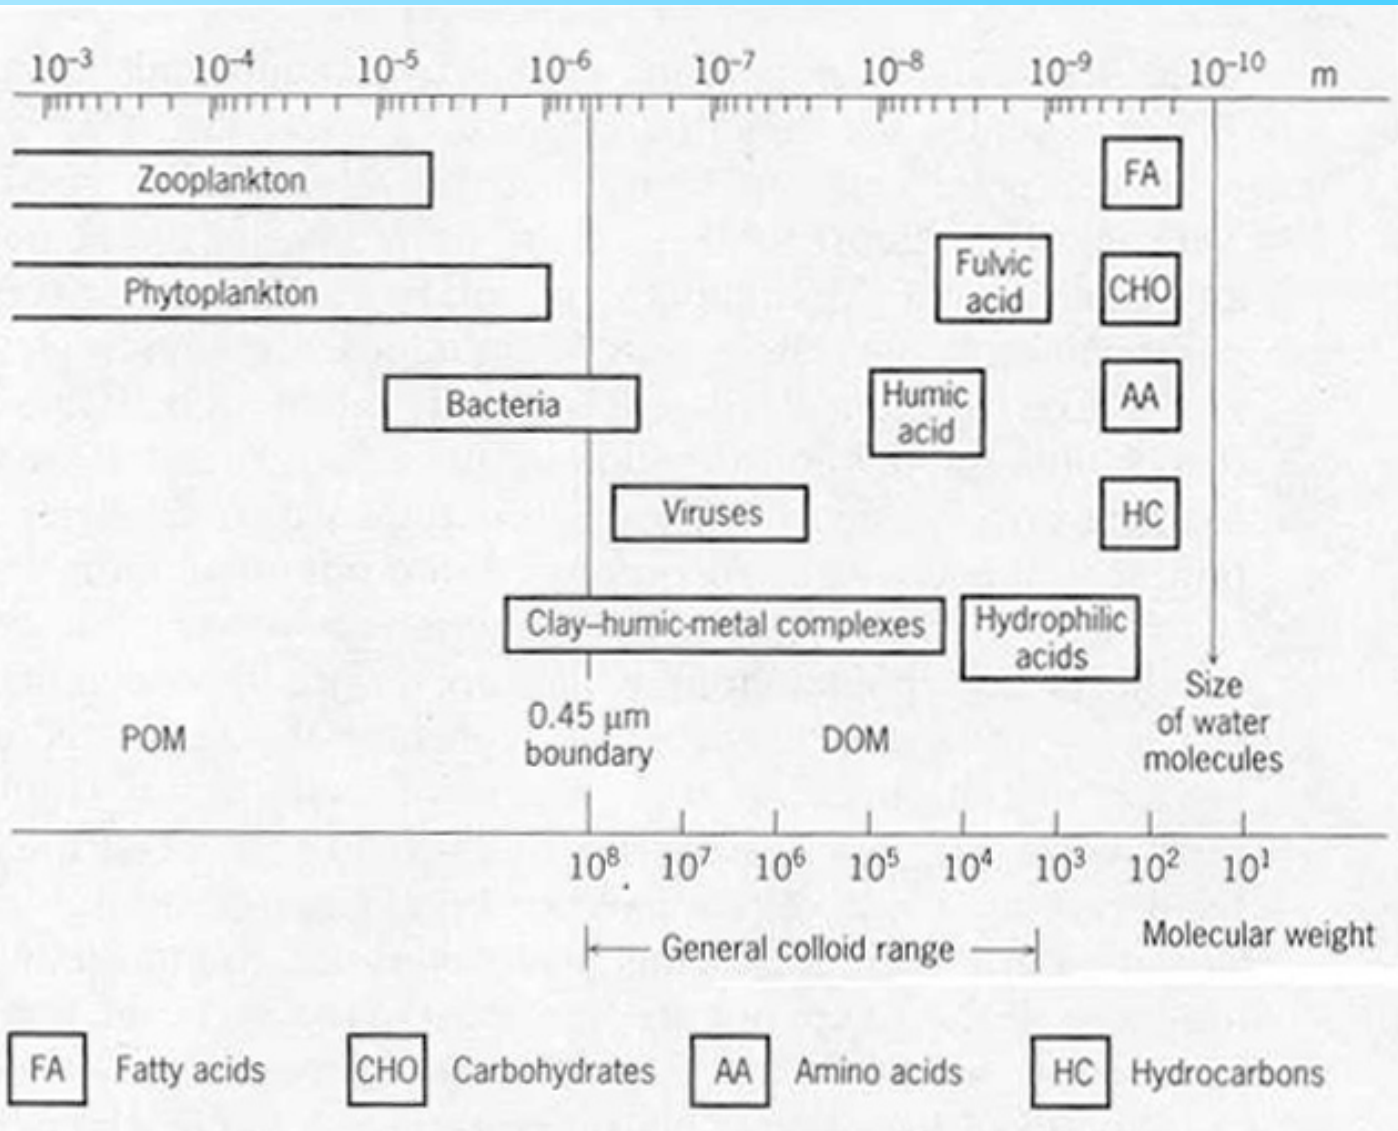

M^{x+} = metal ion, toxic or non, of charge $x+$ (e.g., Cu^{2+} , Al^{3+} , etc.)

 = natural colloid or particle with negative surface charge

M^{x+}  = metal sorbed to particle or organic matter on particle

Organic Carbon Continuum

Libes,
1992

Metal Interactions Together

M^{x+} = metal ion, toxic or non, of charge $x+$ (e.g., Cu^{2+} , Al^{3+} , etc.)

$\text{---} \text{---} \text{---}$ = natural colloid or particle with negative surface charge -

$\text{M}^{x+} \text{---} \text{---} \text{---}$ = metal sorbed to particle or organic matter on particle

Metal-Organic-Clay Colloid

Kleinhepfer reprinted from Albrecht Thier Archiv (1970)

Table 4 Determinations of the fraction of organically complexed copper in seawater

Location	Percent Organic Cu	Technique	Reference
San Francisco Bay	80–92	CLE/DPCSV DPASV CRCP/GFAAS	Donat et al. ^{161b}
Indian Ocean	>99.7	CLE/DPCSV	Donat & van den Berg ⁴⁸
North Sea	>99.9	CLE/DPCSV	Donat & van den Berg ⁴⁸
Sargasso Sea	98.8	CLE/LP/GFAAS	Moffett et al. ¹²²
Sargasso Sea	93	CLE/DPCSV DPASV	Donat & Bruland ^{161a}
North Pacific	99.4–99.8	DPASV	Coale & Bruland ^{160,161}
New York coast	99.8	FPA	Hering et al. ²⁰⁸
Biscayne Bay	99.6	CLE/LP/GFAAS	Moffett & Zika ¹⁵⁹
Narragansett Bay	99.9	CLE/SPE/GFAAS	Sunda & Hanson ¹⁵⁸
Coastal Peru	98	CLE/SPE/GFAAS	Sunda & Hanson ¹⁵⁸
North Atlantic	89–99.8	MnO ₂ ads.	Buckley & van den Berg ¹⁵⁷
North Atlantic	98.8–99.4	CLE/DPCSV	Buckley & van den Berg ¹⁵⁷
South Atlantic	99.9	CLE/DPCSV	van den Berg ¹⁵⁶
Coastal Florida	98.7	Bioassay	Sunda & Ferguson ¹⁵⁵
Mississippi Plume	99.1	Bioassay	Sunda & Ferguson ¹⁵⁵
New York Bight	>95	DPASV	Huizenga & Kester ²⁰⁹
Irish Sea	94–98	MnO ₂ ads.	Van den Berg ¹²⁶

Note: CLE/DPCSV = Competitive ligand equilibration/differential pulse cathodic stripping voltammetry; CRCP/GFAAS = Chelating resin column partitioning/graphite furnace atomic absorption spectrometry; CLE/LP/GFAAS = Competitive ligand equilibration/liquid partitioning/graphite-furnace atomic absorption spectrometry; DPASV = Differential pulse anodic stripping voltammetry; FPA = Fixed potential amperometry; CLE/SPE/GFAAS = Competitive ligand equilibration/solid phase extraction/graphite-furnace atomic absorption spectrometry; MnO₂ ads. = Manganese dioxide adsorption.

Donat & Bruland
1995

Equilibrium Reaction & Expression

$$K = \frac{[M-NOM^{(x-y)-}]}{[M^{x+}][NOM^{y-}]}$$

K = equilibrium constant describing complexation reaction

M-NOM^{(y-x)-} = metal complex of natural organic matter

Metal Speciation = determination of the forms of metal in equilibrium with NOM

Measurement must not disturb equilibrium

Analytical Speciation Methods

- Separation Methods
 - Equilibrium Dialysis
 - Chelating Resin Column Partitioning (CRCP)
- Direct Measurement
 - Differential Pulse Anodic Stripping Voltammetry (DPASV)
 - Differential Pulse Cathodic Stripping Voltammetry (DPCSV)
 - Fluorescence Quenching (FQ)
 - Competitive Ligand Equilibration (CLE)

Equilibrium Dialysis Method

(Glaus, Hummel, Van Loon. Analytica Chimica Acta. 303 (1995) 321-331)

Initial

$$K_1 = \frac{[\text{Hg-DOC}]}{[\text{Free DOC}][\text{Free Hg}]}$$

Final

Dialysis Process

Typical Voltammetry Setup

Voltammogram (DPASV)

E (volts)
