Mineral Identification Key

| Minerals with Metallic Luster |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Hardness | Streak | Cleavage | Specific Gravity | Other Properties | Mineral Chemical Composition |
| 1-5.5 | Yellowishbrown | None | 3.5-4 | Massive, coatings, botryoidal crusts, earthy masses. Yellow, brown, black color. | Limonite <br> Hydrous iron oxides |
| 2.5 | Dark gray | None. Conchoidal fracture. | 5.7 | Massive. Crystals are rare. Steel-gray to black color. | Chalcocite $\mathrm{Cu}_{2} \mathrm{~S}$ |
| 2.5 | Gray to grayblack | Three perfect at right angles | 7.6 | Cubic crystals. Lead-gray color | Galena PbS |
| 2.5-3 | Copper | None | 9 | Massive. Copper color but commonly stained green. Malleable. | Copper Cu |
| 3.5-4 | Dark green to black | None. Uneven fracture. | 4.2 | Massive or granular. Golden yellow to brassy yellow color. | Chalcopyrite $\mathrm{CuFeS}_{2}$ |
| 3.5-4 | White to yellowishbrown | Perfect in six directions | 4 | Fine to coarse granular masses. Tetrahedron shaped crystals. Yellowish-brown to black color. Resinous luster. | $\begin{gathered} \hline \text { Sphalerite } \\ \text { ZnS } \end{gathered}$ |
| 5-6 | Reddish-brown | None. Uneven fracture. | 5 | Massive, granular. Reddish-brown, gray to black color. Can have metallic luster or earthy red color. | $\begin{gathered} \text { Hematite } \\ \mathrm{Fe}_{2} \mathrm{O}_{3} \\ \hline \end{gathered}$ |
| 5.5 | Dark brown | None. Uneven fracture. | 4.6 | Massive or granular. Golden yellow to brassy yellow color. | Chromite $\mathrm{FeCr}_{2} \mathrm{O}_{4}$ |
| 5.5-6 | Brown-reddish | None. Uneven fracture. | 4.7 | Massive or irregular grains. Iron-black color. | Ilmenite $\mathrm{FeTiO}_{3}$ |
| 5.5-6.5 | Black | None. Uneven fracture. | 5 | Massive, granular. Crystals have octahedral shape. Strongly magnetic. Black color. | Magnetite $\mathrm{Fe}_{3} \mathrm{O}_{4}$ |
| 6-6.5 | Greenish-black | None. Uneven fracture. | 5.2 | Cubic crystals with striated faces. Massive. Pale brass-yellow color, darker if tarnished. | Pyrite $\mathrm{FeS}_{2}$ |
| 6-6.5 | Brownish | Good in one direction. Conchoidal fracture in other directions. | 4.2 | Slender, prismatic crystals or granular masses. Reddish-brown (common) or black (rare) color. Adamantine luster. | $\begin{gathered} \hline \text { Rutile } \\ \mathrm{TiO}_{2} \end{gathered}$ |
| Minerals with Nonmetallic Luster |  |  |  |  |  |
| 1 | White to greenish | One, perfect | 2.6-2.8 | Small scales, compact masses. Feels slippery. White to greenish color. Pearly luster. | $\begin{gathered} \text { Talc } \\ \mathrm{Mg}_{3} \mathrm{Si}_{4} \mathrm{O}_{10}(\mathrm{OH})_{2} \end{gathered}$ |
| 1-2 | Black | One, perfect | 2.2 | Scaly masses. Forms slippery flakes. Black color. Metallic to dull luster. | $\begin{gathered} \text { Graphite } \\ \text { C } \end{gathered}$ |
| 2 | Colorless | One, perfect | 2.3 | Elongate or tabular crystals. Fibrous and earth masses. Colorless. Vitreous to pearly luster. | $\begin{gathered} \text { Gypsum } \\ \mathrm{CaSO}_{4} 2 \mathrm{H}_{2} \mathrm{O} \\ \hline \end{gathered}$ |
| 2-2.5 |  | One perfect, parallel to | 2.6-2.9 | Flaky masses of minute scales. Light to dark green | Chlorite |

|  | Colorless | flakes |  | color. Greasy luster | $(\mathrm{Mg}, \mathrm{Fe})_{5}(\mathrm{Al}, \mathrm{Fe})_{2} \mathrm{Si}_{3} \mathrm{O}_{10}(\mathrm{OH})_{8}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 2-2.5 | White | One, perfect | 2.6 | Soft, earth masses. Submicroscopic crystals. White, yellowish color. Plastic when wet. Emits clayey odor. Dull luster | $\begin{gathered} \text { Kaolinite } \\ \mathrm{Al}_{2} \mathrm{Si}_{2} \mathrm{O}_{5}(\mathrm{OH})_{4} \end{gathered}$ |
| 2-2.5 | Colorless | One, perfect | 2.7 | Thin flakes. Colorless, pale green or brown color | Muscovite $\mathrm{KAl}_{3} \mathrm{Si}_{3} \mathrm{O}_{10}(\mathrm{OH})_{2}$ |
| 2.5 | Colorless | Perfect to give cubes | 2.2 | Cubic. Colorless. Tastes salty | $\begin{aligned} & \hline \text { Halite } \\ & \mathrm{NaCl} \\ & \hline \end{aligned}$ |
| 2.5-3 | Black | One, perfect | 2.8-3.2 | Irregular masses of flakes. Black, brown, dark green color. | $\begin{gathered} \text { Biotite } \\ \mathrm{K}(\mathrm{Mg}, \mathrm{Fe})_{3} \mathrm{AlSi}_{3} \mathrm{O}_{10}(\mathrm{OH})_{2} \end{gathered}$ |
| 2.5-5 | White | One, perfect | 2.2-2.6 | Platy or fibrous. Light to dark green. Smooth, greasy feel. | $\begin{gathered} \text { Serpentine } \\ \mathrm{Mg}_{3} \mathrm{Si}_{2} \mathrm{O}_{5}(\mathrm{OH})_{4} \\ \hline \end{gathered}$ |
| 3 | Colorless | Three perfect, give a rhomb-shaped fragment | 2.7 | Rhomb-shaped crystals and granular masses. Colorless or white. Effervesces with dilute HCl | Calcite $\mathrm{CaCO}_{3}$ |
| 3.5 | Colorless | Three perfect, give a rhomb-shaped fragment | 2.8 | Rhomb-shaped crystals and granular masses. White or gray color. Pearly luster. Similar to calcite but does not effervesce in cold, dilute HCl unless powdered. | Dolomite $\mathrm{CaMg}\left(\mathrm{CO}_{3}\right)_{2}$ |
| 4 | Colorless | Perfect in four directions | 3.2 | Cubic crystals and granular masses. Colorless, bluish green. | Fluorite $\mathrm{CaF}_{2}$ |
| 4.5 | White | One perfect, one imperfect | 3.6 | Bladed crystals. Blue, white, gray color. | $\begin{aligned} & \hline \mathrm{Kyanite}^{2} \\ & \mathrm{Al}_{2} \mathrm{SiO}_{5} \\ & \hline \end{aligned}$ |
| 5 | White | Poor. One direction | 3.2 | Perfect six-sided crystals and granular masses. Green, brown, blue, or white color. | $\begin{gathered} \text { Apatite } \\ \mathrm{Ca}_{5}\left(\mathrm{PO}_{4}\right)_{3}(\mathrm{OH}, \mathrm{~F}, \mathrm{Cl}) \end{gathered}$ |
| 5-6 | Green, greenish-black | Two, perfect, nearly at right angles | 3.2-3.9 | 8 -sided stubby crystals and granular masses. Dark green to black. Distinguished from hornblende on the basis of the nearly right-angle cleavage. | $\begin{gathered} \text { Augite } \\ \mathrm{Ca}\left(\mathrm{Mg}, \mathrm{Fe}^{2}\right) \mathrm{Si}_{2} \mathrm{O}_{6} \end{gathered}$ |
| 5-6 | Green, greenish-black | Two, intersecting at $56^{\circ}$ and $124^{\circ}$ | 2.9-3.8 | Long, six-sided crystals, fibers, irregular grains. Dark green to black. Distinguished from augite on the basis of the different cleavage | Hornblende Complex |
| 6 | White | Two perfect at right angles | 2.6 | Prism-shaped crystals and granular masses. Fleshcolored, pink, white, or gray color | Orthoclase $\mathrm{KAlSi}_{3} \mathrm{O}_{8}$ |
| 6-6.5 | White | Two perfect, not quite at right angles | 2.6-2.7 | Tabular crystals and irregular grains. White to dark gray. Cleavage planes may show fine parallel striations. | Plagioclase $\mathrm{NaAlSi}_{3} \mathrm{O}_{8}$ to $\mathrm{CaAl}_{2} \mathrm{Si}_{2} \mathrm{O}_{8}$ |
| 6-7 | None | One perfect, one poor | 3.4 | Small elongate crystals. Fibrous. Yellowish-green to dark green color. | Epidote Complex |
| 6-7 | None | Breaks irregularly | 3.2 | Long, needle-like crystals and fibers. White or gray in color | Sillimanite $\mathrm{Al}_{2} \mathrm{SiO}_{5}$ |

| $6.5-7$ | None | None. Conchoidal <br> fracture | $3.2-4.3$ | Small grains and granular masses. Olive green to <br> yellowish-green color. | Olivine <br> $(\mathrm{Mg}, \mathrm{Fe})_{2} \mathrm{SiO} \mathbf{S i}_{4}$ |
| :---: | :---: | :---: | :---: | :--- | :---: |
| $6.5-7$ | None | None. Uneven fracture | $3.5-4.3$ | Perfect crystals with 12 or 24 sides and granular <br> masses. Red, brown, yellowish-green, black color | Garnet <br> Complex |
| 7 | None | None. Conchoidal <br> fracture | 2.6 | 6-sided crystals and granular masses. Colorless, <br> white, gray but may have any color depending on <br> impurities. Vitreous to greasy luster. | Quartz <br> $\mathrm{SiO}_{2}$ |
| $7-7.5$ | None | None | $3-3.3$ | Elongate crystals commonly with triangular cross <br> section. Black, brown, red, pink, green, blue, and <br> yellow color. | Tourmaline <br> Complex |
| 7.5 | None | Weak, parallel to length <br> of crystal | 3.2 | Long crystals, often square in cross-section. Often <br> flesh-colored. | Andalusite <br> $\mathrm{Al}_{2} \mathrm{SiO}_{5}$ |
| 9 | None | Poor | 4 | Hexagonal crystals common. Gray to brown color. | $\mathrm{Corundum}_{\mathrm{Al}_{2} \mathrm{O}_{3}}$ |
