" 0	Theoretical Foundations		
	Theories allow us to predict behavior		
	Theories allow as to predict behavior		
	Prediction = probabilistic		
	Do not predict to individual		
	Typical v. atypical preferable to normal v.		
	abnormal		
# 4			
	Theoretical Foundations		
	Underlying Assumptions		
	Atypical development is multiply determined Child and environment = interdependent		
	Interact dynamically		
	Transactional" or "Relational" Atypical development involves		
	 continuities & discontinuities 		
	quantitative & qualitative changes patterns of behavior over time		

# 5		
•	Developmental	
	-	
	 Sensitive period = window of time during 	
	which environmental influences are optimal	
	Window closes: more difficult	
	Parent-child attachment	
	 Critical period = window of time where event 	
	must happen for outcome to occur	
	Window closes: too late	
	Cell migration	
Ψ.С		
#6		
	Developmental considerations	
	Johnny cannot sit still in the chair for 20 minutes and look at a book.	
	He looks all around, gets up and wanders about the room.	
	Is Johnny's behavior atypical?	
	Susan clings to her mother's leg when she tries to leave the room.	
	When she does go, Susan cries.	
	 Is Susan's behavior atypical? 	
	Must always consider helpsyler in the section of second	
	 Must always consider behavior in the context of expected developmental levels

# 13	Biological Perspectives (cont.) Genetic Contributions Few specific genetic causes identified as underlying cause of psychopathology Genetic contributions to psychological disorders come from many genes that each make relatively small contributions Genes Do not act alone And environments interact Do not determine behavior	-	
# 14	Ecocultural model Urie Bronfenbrenner Environment series of nested contexts Understand behavior? Understand contexts Bi-directional	- - - -	
# 15	Ecology • Child: center of interconnected networks • Biological • Genes, physical • Neurological • Brain structure, function, chemistry • Temperament • Individual differences • Biological basis of personality	- - - - -	
# 16	Bronfenbrenner's Ecological Model Microsystem • Direct Exosystem • Indirect Mesosystem • Connections Macrosystem • Culture	-	

# 17	Temperament Thomas & Chessjust ONE approach! NYLS = parent report Nine dimensions combined into profiles Temperament types Easy Difficult Slow to Warm Up Goodness of Fit Critical linkage child to social context	- - - -	
# 18	Inhibited & Uninhibited Children • Kagan and colleagues • Coherent behavioral & physiological profiles over time • Two types do not capture all children, but two fundamental categories • Evident in infancy: CNS precursors • More reactive HPA axis→ Inhibited • Less reactive HPA axis→ Uninhibited • Malleable **	- - - -	
# 19	Temperament & Contexts - Home - Influence OF maternal style - Influence ON maternal style - School - Social networks and activities - Job and career	- - - -	
# 20	Social Contexts over Development Changing spheres of influence Broadens over time Family, school, social groups, community Increasing choice over time Actively select niche Consistent with individual proclivities, temperament Tiger and Shark	- - - -	

# 21	Temperament & Behavior Genetics Approach to studying individual differences Compare similar to dissimilar genes in similar and dissimilar environments Twin Studies Monozygotic twins v. Dizygotic twins Which are more alike on traits Adoption studies Similarities to Bio parents? Adoptive parents?	
# 22	Other Developmental Models - What is "in the driver's seat" - Behavioral - Cognitive - Psychosexual - Psychosocial - Attachment	
# 23	Behavioral: Learning Operant Conditioning Reinforce: Increase likelihood response will occur Positive: Addition of something Negative: Removal of something Punish: Decrease likelihood response will occur NOT defined a priori, depends on result! Classical: Paired associations between previously neutral stimuli & unconditioned stimuli Applied Behavior Analysis: behavior as a function of its antecedents and consequences	
# 24	Social Cognition - Social learning considers the influence of cognitive mediators, affect, and contextual variables in the etiology and maintenance of behaviors - Social cognition relates to how children think about themselves and others	

# 25	Cognitive: Piaget Stage Theorist Stages are pervasive Successful mastery stage X requires successful mastery stage X-1 Child biologically prepared for movement to subsequent stages combined with active interaction with the environment Neurobehavioral development Force behind social and emotional	
# 26 # 27	Piaget • Sensori-Motor • Repetition for pleasure and comfort • Pre-Operational • Logic with limits; Egocentrism • Concrete Operations • Can combine >1 logical operation at a time • Formal Operations • Back up, see whole picture, evaluate premise	
	Piaget implications DP • Sensori-Motor • Sensori Memories • Pre-Operational • It's all my fault • Concrete Operations • Parents are complicated; multidimensional • 5-7 year shift: VERBAL • Formal Operations • Argument enhanced; belief no out (suicide)	
# 28	Emotional Development Freud: Psychosexual Stage theorist Physical development driving Oral Anal Hallic Genital	

# 29	Emotional Development Erikson: Psychosocial Stage theorist Social relationships driving Trust v. Mistrust Autonomy v. Shame & Doubt Initiative v. Guilt Industry v. Inferiority Identity v. Role Confusion Intimacy v. Isolation Generativity v. Stagnation Integrity v. Despair	
# 30	Implications DP • Early deprivation • Off track for further development • SEQUENCE of stages • Optimal time passed, window NOT closed • More difficult to master • Therapy	
# 31	Emotional Development Bowlby, Ainsworth, Main: Attachment Primary attachments develop early Basis: self concept, exploration, later relationships Strange Situation Securely attached Insecure/anxious—avoidant Insecure/anxious—ambivalent Insecure/anxious—disorganized Adult Attachment Interview	
# 32	Emotional Development Sequence Primary emotions—e.g., joy, disgust, fear Secondary emotions—e.g., pride, shame Require self evaluation in relation to set of standards; post 18-24 month shift Emotion regulation: capacity to shift and moderate in relation to welfare and context Express, recognize, understand, regulate
